## About L&S

- **45 years serving the Plant Hire Industry**
- **Main dealers for many construction brands**
- **Team of friendly, knowledgeable staff**
- **Next day delivery for stock items**

L&S Engineers was formed by two colleagues Wyn Lees and Alan Shaw in 1971 and operated from a small garage rented off the coal board. The business started out making custom fabrications, water strainers and starting handles and soon grew to supplying machinery and small plant spares to its customers based mainly in the West Midlands.

The spares business continued to grow and in 1991 the engineering side was sold off to focus on the supply of replacement parts. The business moved into a large modern warehouse facility in Brownhills where it remains today.

Thousands of businesses based in the UK, Europe and beyond rely on our unique product range, dependable service and product knowledge to keep their businesses supplied and running smoothly.

CHECKPOINT® is the modern, low cost solution to a long standing operational and management need in the transport industry of implementing and maintaining a low cost, effective procedural system that will allow the checking of wheel nuts for tightness, accurately and economically. The fitting of CHECKPOINT® facilitates these checks within a daily walk round, zero defect reporting procedure.

CHECKPOINT® may be fitted Point to Point, Elephant File, in Echelon or Patterned Configuration to suit the workshop and user.

The size below refers to the 'across the flats' hexagonal dimension of the wheel nut. An accurate means of measuring the wheel nut size is to use a socket
